CONTINENTAL HYDRAULICS

POWERFLOW™ PVR SERIES VANE PUMPS

POWERFLOW™ PVR SERIES VANE PUMPS

POWERFLOW™ PVR SERIES VANE PUMPS

PRESSURE COMPENSATED VANE PUMPS FOR THE MOST DEMANDING APPLICATIONS

What Makes PowrFlow™ PVR Vane Pumps Your Best Buy?

Continental Hydraulics PowrFlow™ PVR Vane Pumps deliver the rugged, reliable performance and value you've come to expect in all our products. They outperform sensitive piston pumps in harsh environments. PVR Vane Pumps deliver faster response, and require less external compensation compared to fixed displacement designs.

Use PVR Vane pumps in tough applications such as brick and block plants, poultry processing systems, foundries, and mines.

Features and Benefits

- 1500 PSI Rated at Full Rated Flow
- 4 to 70 Gallon Sizes
- 100% Tested
- Three Year Warranty

Balanced Vane Tip Loading

Acts through the entire pumping cycle to extend ring and vane life.

Quiet Operation

Computer-designed porting reduces noise at all pressure and flow levels. With noise levels as low as 68 dBA (NFPA T3.9.12M-1970 (R1981) tested) there's little or no need for noise enclosures.

Patented Walking Ring

A unique indexing cam ring rotates slightly every time output changes. Wear is distributed evenly around the entire ring inside surface. You get up to 10 times longer pump life than with conventional fixed-ring designs.

Direct Spring Operated Compensator

Provides fast pressure compensation for variable system demands. Eliminates sensitive hydraulic assist passages or valves that are prone to clogging.

Patented Pressure Balanced Thrust Plates

Precision machining results in pump efficiencies up to 90%, eliminates shims and spacers, simplifies maintenance.

Heavy Forged One-Piece Rotor Shaft

Built strong and rigid to take system loads with minimal deflection, for increased pump life.

Hydrodynamic Journal Bearings

There's no shaft-to-bearing contact, so pump life is virtually unlimited - not determined by B-10 rating.

PVR SERIES VANE PUMPS

HOW A VANE PUMP WORKS

How It Works

Continental Hydraulics' variable volume, pressure displacement, pressure compensated vane pumps are highly efficient and reliable sources of hydraulic power. Figures 1 and 2 show how the moving cam ring provides variable volume and constant pressure.

As the rotor turns clockwise, the volume between two adjacent vanes (segment) increases at the suction porting. When these segments enter the pressure port area, the volume is reduced and forces the fluid out through the pressure port.

Maximum output occurs when the cam is in the extreme eccentric position (Figure 1). When system requirements are less than maximum pump output, system pressure forces the ring up (against the spring), reducing eccentricity and resulting in less flow.

Constant pressure from zero to full displacement is maintained by the spring. When system volume demand falls to zero, the system pressure drives the ring to a concentric position (Figure 2). This changes the displacement to zero while system pressure is maintained.

Figure 1

Figure 2

Quiet Operation

Geometry of porting combined with precision-fitting vanes and moving parts make Continental pumps among the most quiet in the industry. Sound levels range from below 68 dBA for 6 gpm models when tested in accordance with NFPA Recommended Standard T3.9.1M-1970 (R1981).

A More Efficient Pump

Continental pumps produce only the flow the system demands at any one time. This results in less heat generation, fewer system components, smaller or no heat exchanger and does not require a high pressure bypass. The result is a simpler, more energy efficient system that accurately and efficiently matches fluid power volume to the task while maintaining constant pressure in the system.

Options and Accessories

Continental pumps may be tandem mounted to achieve multiple pump operation from a single power source for separate or auxiliary circuits. Pump options include handwheel pressure and volume controls; dual volume and dual pressure control combinations, plus a variety of mounting arrangements.

GENERAL SPECIFICATIONS

Recommended Fluids

Petroleum base and most phosphate ester fluids, water glycols and emulsions with water content not exceeding 40%. Consult the factory for other fluids.

Viscosity

Maximum at
Start-Up..... 1000 SUS (220 CS)
Optimal..... 175 SUS (40 CS)
Limits..... See Chart Below

Start-up at 1000 SUS (220 CS) is intended to be used for warm-up only. Actual hydraulic circuit should not be attempted above 400 SUS (90 CS). Be certain the entire hydraulic circuit has been warmed up before full flow, full pressure application begins.

Operating Temperature

Fluid temperatures up to 160° F. (71° C.) will not appreciably affect pump performance as long as fluid viscosity is not allowed to drop too low. However, from a safety standpoint, temperatures above 130° F. (54° C.) are not recommended.

Filtration

The following recommendations are for maximum service life. Consult with your fluid and filter manufacturer for concurrence.

Suction

Petroleum
Fluids..... 100 Mesh Screen
Water Base
Fluids..... 60 Mesh Screen
Phosphate
Esters 60 Mesh Screen

Return

ISO 18/15/13 (25 micron) to 1000 psi (69 bar)
ISO 16/13/11 (10 micron) to 2000 psi (138 bar)

Drive Coupling

Jaw-type with flexible web is recommended. Tire-type flexing elements and chain-type are **NOT** recommended. For belt, chain and gear drives, consult the factory.

Drive Shaft Alignment

Pump and motor shaft alignment must be within .003" (.08 mm) TIR for maximum bearing life.

Relief Valves

A relief valve is not required or necessary for pump outlet pressures less than 1500 psi (103 bar). For pressures greater than 1500 psi (103 bar), it is recommended that a direct-operated, rapid response differential piston relief valve be used to relieve pressure spikes and/or surges. Set the relief valve approximately 200 psi (14 bar) higher than the pump setting.

Typical Relief Valve Application Schematic

Specified operating viscosities must be followed for optimum life and performance. For continuous operating temperatures above 140° (60° C.), consult the fluid manufacturer for correct fluid at elevated temperatures.

NOTES:

- * Volumetric displacement is measured displacement at 91.5 psi (6.3 bar) and rated rpm. Volumetric displacement varies with both pressure and rpm. Flow rates at any rpm other than the rated rpm may be approximated as follows:
 $Q_2 = Q_1 (N-142)/1667$ where Q_1 = Flow (gpm) at rated rpm at 91.5 psi (6.3 bar).
 Q_2 = Flow (gpm) at N rpm.
 N = rpm at which Q_2 is to be determined.
- ** **6B** - Maximum rpm at full displacement - 2800 rpm. For higher rpms up to 3600 rpm, pump displacement must be reduced to limit flow to 9.5 gpm (36 lpm) maximum.
8B - Maximum rpm at full displacement - 2100 rpm. For higher rpms up to 3600 rpm, pump displacement must be reduced to limit flow to 9.5 gpm (36 lpm) maximum.

 Q_2 = Flow (gpm) at N rpm.

N = rpm at which Q_2 is to be determined.

** When operating above 1500 psi (103 bar), it is recommended that a direct-acting differential relief valve be used at the pump to relieve pressure spikes and surges.

PVR15-20B - Maximum rpm at full displacement - 2250 rpm. For higher rpms up to 2400 rpm, pump displacement must be reduced to limit flow to 25 gpm (95 lpm) maximum.

PRESSURE and VOLUME ADJUSTMENT SENSITIVITY

		PUMP IZE	S 15B	20B	30B
PRESSURE ADJUSTMENT	Press Change/Turn	psi (bar)	230 (16.0)	310 (21.0)	230 (16.0)
	Max. Torque	ft./lbs. (kg/m)	15.0 (2.0)	15.0 (2.0)	9.0 (1.2)
VOLUME ADJUSTMENT	Flow Change/Turn	gpm (lpm)	10.0 (38.0)	10.0 (38.0)	13.0 (49.0)
	Min. Flow Adjust.	gpm (lpm)	2.0 (7.5)	2.0 (7.5)	3.5 (13.0)
	Max. Torque	ft./lbs. (kg/m)	21.0 (3.0)	29.0 (4.0)	21.0 (3.0)

CAUTION: Turning the Maximum Volume Control in too far can force the cam ring over-center, causing damage.

PVR-15 SERIES VANE PUMPS

VARIABLE DISPLACEMENT, PRESSURE COMPENSATED

NOTE: Typical performance curves are based on ISO VG46 oil at 120° F. (49° C.). Above 400 SUS (84 CS), add 2% hp/100 SUS.

NOTE: Deadhead horsepower is read from curves at 0 gpm flow and pressure compensator setting psi.

NOTES:

* Volumetric displacement is measured displacement at 91.5 psi (6.3 bar) and rated rpm per ANSI specification. Volumetric displacement varies with both pressure and rpm. Flow rates at any rpm other than the rated rpm may be approximated as follows:

$$Q_2 = Q_1 (N-142)/1667 \text{ where } Q_1 = \text{Flow (gpm) at rated rpm at 91.5 psi (6.3 bar).}$$

$$Q_2 = \text{Flow (gpm) at N rpm.}$$

$$N = \text{rpm at which } Q_2 \text{ is to be determined.}$$

** When operating above 1500 psi (103 bar), it is recommended that a direct-acting differential relief valve be used at the pump to relieve pressure spikes and surges.

Maximum rpm at full displacement - 1900 rpm. For higher rpms up to 2000 rpm, pump displacement must be reduced to limit flow to 60 gpm (227 lpm) maximum.

<https://oilsolutions.com.au/>

sales@oilsolutions.com.au

Model Shown: PVR15-15B15-RF-0-525B60L

FEATURES

- High and low field-adjustable pressure levels.
- High and low field-adjustable volume levels.
- Field-adjustable pressure rate change between high and low levels.
- Field-adjustable acceleration and deceleration rates between high and low volume levels.
- Pump mounted control valve, or pilot signal from a remote source.
- All combinations of two pressure levels and two volume levels possible.

BENEFITS

- Replace dual flow valve circuits ... reduce overall valve count.
- Replace high-low pressure circuits ... eliminate multiple pumps and pressure intensifiers.
- Reduce system shock by smoothly accelerating and decelerating loads and gradually increasing and decreasing pressures.
- Reduce overall system costs.
- Energy efficient ... use only the power required for the job.
- Available as a field installed option.

1800-OILSOL

PVR SERIES VANE PUMPS

CONTROL OPTIONS

DUAL PRESSURE CONTROL

- Two constant pressure levels; field adjustable to meet system requirements.
- Pressure compensated variable flow; zero to maximum gpm.
- Pump mounted control valve or remote pilot signal.

OPTIONAL RATE OF
CHANGE VALVE
(CODE 8)

DUAL VOLUME CONTROL

- Constant pressure; field adjustable to meet system requirements.
- Two field adjustable flow limits;
 - Low limit (A)
 - High limit (B)
- Pump mounted control valve or remote pilot signal.

NORMAL LOW VOLUME -
ENERGIZE TO HIGH
VOLUME (REMOTE
OPERATOR ONLY)

NOTE: When using dual volume control, a minimum pump pressure (P_M) must be maintained to hold pump in low volume, output where $P_M = 55\%$ of P_C (maximum compensated pressure).

1800-OILSOL

DUAL PRESSURE/DUAL VOLUME CONTROL

Common Control Valve

- Two field adjustable pressure levels and flow limits provide:
 - Low pressure, high flow (A)
 - High pressure, low flow (B)
- Pump mounted control valve or remote pilot signal.

NOTE: When using dual volume control, a minimum pump pressure (P_M) must be maintained to hold pump in low volume, output where $P_M = 55\%$ of P_C (maximum compensated pressure).

Independent Control Valves or Signal

- Two field constant pressure levels and adjustable flow limits provide:
 - High pressure, high flow (A)
 - High pressure, low flow (B)
 - Low pressure, high flow (C)
 - Low pressure, low flow (D)
- Remote mounted control valves for pilot signals only.

NOTE: When using dual volume control, a minimum pump pressure (P_M) must be maintained to hold pump in low volume, output where $P_M = 55\%$ of P_C (maximum compensated pressure).

***NOTE:** The Design Letter listed is the earliest version that the assembly is physically compatible with all later models.

N/A Not Applicable.

NOTE 1: Not Available. Please consult the factory.

IMPORTANT !

Check the appropriate pump design code with the above chart list before ordering to insure installation compatibility.

NOTES: (a) Handwheel Accessory Kits contain the handwheel and a spring pin for installation on an existing Adjustment Screw. If a pump has a plug only at the volume adjustment screw location, a Volume Screw Assembly must be ordered separately.
(b) For installation dimensions and product references, refer to the appropriate option modification in the PVR Vane Pump Section.

PVR SERIES VANE PUMPS

MOUNTING ACCESSORIES

AIR BLEED VALVE

DESCRIPTION

The air bleed valve permits easier pump priming and/or start-up under deadhead conditions. This valve is normally open to permit oil and air (if present) to pass from inlet to outlet and directly back to the tank. Pressure in the spool center section is bled via spool clearance to the no-spring end of the spool. As pressure builds, it overcomes the spring, shifts the spool to close the inlet port and allows full pump flow to the circuit.

VALVE SCHEMATIC

TYPICAL PERFORMANCE SPECIFICATIONS

MINIMUM FLOW RATE		8 gpm
MINIMUM OPERATING PRESSURE	@ 8 gpm	500 psi
OPERATING PRESSURE	@ 15 gpm	350 psi
	@ 50 gpm	200 psi
MAX. OPERATING PRESSURE		3500 psi
MINIMUM PRESSURE TO HOLD CLOSE		150 psi
TYPICAL CLOSING TIMES	@ 500 psi	30 sec.
	@ 1500 psi	10 sec.
SEALS		VITON

NOTE: Data is based on ISO VG 46 oil at 120° F. (49° C.).

TYPICAL APPLICATIONS SCHEMATIC

ELECTRIC MOTOR PRIME MOVER

In this circuit, the valve is used to automatically purge the air in the circuit. It will automatically block flow through it in a short period of time.

ENGINE PRIME MOVER

Here the valve passes flow for a short time allowing an internal combustion engine to come up to speed. This would eliminate using a separate open center valve for this purpose.

NOTE:

The outlet line should be piped below the oil level to prevent foaming of the oil.

PVR SERIES VANE PUMPS

MOUNTING ACCESSORIES

TANDEM PUMP OPTIONS

BENEFITS

- Permits multiple pump operation without additional mounting flanges and couplings..
- Reduce system costs. Space saver -- one power unit where two or more were necessary. Smaller electric motor.
- Reduce operating costs. More efficient in high-low system than single pressure compensated pump.

POWRFLOW™ PVR SERIES VANE PUMPS

PRESSURE COMPENSATED VANE PUMPS FOR THE MOST DEMANDING APPLICATIONS

PowrFlow™ Vane Pumps - Just What You Need!

Continental Hydraulics PowrFlow™ PVR Vane Pumps give you all of what you need, and less of what you don't want - such as heat and complexity.

Variable volume, pressure compensated design maintains constant pressure, while matching system flow demands.

Pressure relief valves are eliminated, which simplifies circuit design. There's less heat build-up, so heat exchangers can be smaller - or eliminated entirely. PVR Vane Pumps use smaller electric motors than fixed displacement vane pumps, which reduces the cost of installation and operation.

The result is a simpler, more energy efficient system, that accurately matches fluid power volume to the job, while maintaining constant pressure.

How Does Pressure Compensation Work?

As the PVR Vane Pump rotor turns clockwise, the volume between two vanes (a segment) increases at the suction porting. When segments enter the pressure port area, volume is reduced, forcing fluid through the pressure port.

Maximum output occurs when the pressure ring is at its' most eccentric position, as shown in the illustration below. When system requirements are less than maximum pump output, system pressure forces the pressure ring up against the spring, reducing eccentricity, which reduces flow.

When system volume demand falls to zero, system pressure drives the ring to a concentric position. This changes the displacement to zero, while system pressure is unchanged. Constant pressure is maintained whether at zero or full displacement, so system response is fast.

Exclusive 3 Year Warranty

Continental Hydraulics Division warrants all vane pumps supplied by Continental Hydraulics against defects in material and workmanship under normal use and service for three years from the date of shipment.

This warranty does not cover ordinary wear and tear, abuse, misuse, overloading, altered products, use of improper fluid, or use of materials not of Continental Hydraulics manufacture or supply.

Maximum Output
Cam Ring is in its' most eccentric position

POWERFLOW™ PVR SERIES VANE PUMPS

PRESSURE COMPENSATED VANE PUMPS FOR THE MOST DEMANDING APPLICATIONS

Why settle for “close enough” when you need hydraulics?

Continental Hydraulics offers a complete line of products to meet your need for reliable, precise fluid power. In addition to the Vane Pumps shown in this catalog, Continental also offers piston pumps, a full line of control valves, modular stack valves, integrated hydraulic circuits, and hydraulic power units.

Continental's products are used in diverse applications such as plastic molding machinery, machine tools, pulp and paper machines, marine auxiliary power controls and deck handling equipment, and masonry product production equipment.

Distributors who know how to help — Anyone can say, “Here’s our catalog, take your pick.” Continental Distributors work with you to find out what you need, and with our engineers to make sure you get it.

Service and support — To provide maximum service and assistance, Continental Hydraulics maintains a strong distribution network, with representatives throughout North America and around the world. The average Continental Distributor has been with us for 15 years. He’s got repair and replacement parts, and

the skill to solve your hydraulics problem.

Our Distributors work hand-in-hand with our Engineers to select components and build systems that will meet your toughest specifications. And they’ll suggest creative solutions that can help save money or enhance performance.

Whether you need a complete hydraulic power supply or a single pump, come to Continental.

ABOUT CONTINENTAL HYDRAULICS

Rugged, durable, high-performance, efficient—the reason Continental Hydraulics' products are used in some of the most challenging applications across the globe. With a commitment to quality customer support and innovative engineering, Continental's pumps, valves, power units, mobile and custom products deliver what the markets demand. Continental has been serving the food production, brick and block, wood products, automotive and machine tool industries since 1962. Learn how our products survive some of the most harsh environments.
