SAFETY+QUALITY+RELIABILITY

Important Warnings and Cautions

WARNINGS:

Do not mix and match products.

The mixing of product brands in hose assemblies is not recommended.

Hydraulic hose from one supplier has seldom been verified by testing with fittings from another. Performance capabilities of such mixed assemblies will therefore be unpredictable and are not guaranteed by either supplier.

Hose coupling specifications and published assembly instructions are not necessarily valid in these instances. It is the hose assembler's responsibility to consult with suppliers before intermixing hose and end fittings.

Similarly, assembly equipment is not usually interchangeable and it is the fabricator's responsibility to consult with the manufacturer for the correct equipment.

Always follow the manufacturer's instructions for correct preparation and fabrication of CHILD-GATES hose assemblies.

The welding of any CHILD fitting, including weld-on, salvage, lifesaver or any other components should only be carried out by suitably qualified personnel.

The company does not warrant the performance of such fittings or products, once welded (except by the company, its servants or its selling agents). These welded products should be tested and proved fit for the use intended. Not testing, not proving, faulty fabrication or faulty welding may result in an unsatisfactory or even dangerous product.

BE AWARE THAT:

Hydraulic fluid under pressure can be potentially dangerous!

An explosive burst or stream of escaping fluid can cause damage to equipment or serious injury to persons nearby.

Highly pressurised fluid escaping from a small pinhole can be almost invisible, and yet exert extreme force capable of penetrating the skin and other tissues, causing possible severe injury.

Pressurised fluids, if released uncontrolled, can exert a tremendous explosive force.

Hot fluids or chemicals can cause severe burns.

Some fluids are highly flammable.

CAUTIONS:

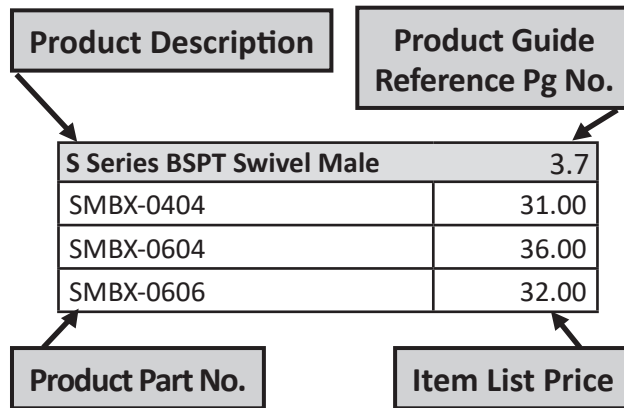

Working Pressures for Hose Assemblies

Since many factors influence the pressure at which a hydraulic system will or will not perform satisfactorily, stated maximum hose working pressures should not be exceeded.

For any severe applications it is recommended sufficient testing be conducted and reviewed by both the hose assembler and the machine manufacturer to assure performance levels will be safe and satisfactory.
