Fan Drive

Electrohydraulic Fan Drive Systems

- Long life expectancy
- Optional speed sensor
- Two speed, variable speed or reversible configurations
- Optional outrigger bearing
- Reduced overall dimension
- Electronic control available

Walvoil Fan Drive is a new range of vehicle cooling systems based on external gear motors; these types of motors are widely used in modern hydraulics due to their high performance, long life service and low maintenance costs.

An electrohydraulic Fan Drive offers significant advantages if compared with traditional solutions with electric or belt drives. Maximum performance is achieved by coupling the Fan Drive with the Walvoil CED400W electronic control units, fully programmable.

GENERAL WORKING CONDITIONS

Displacement		from 4 to 31.5 cm ³ /rev from 0.24 to 1.92 in ³ /rev
Max continuous pressure	up to	250 bar - 3600 psi
Fluid		hydraulic mineral oil-based
Fluid temperature range	with NBR (buna N) seals	from -20 to +80 °C from -4 to +176 °F
	with FPM (viton) seals	from -20 to +100 °C from -4 to +212 °F
Viscosity	Recommended	from 15 to 92 mm ² /s (cSt)
	Permitted for starting	2000 mm ² /s (cSt)
Max level of contamination	Recommended for operating pressure > 150 bar (2150 psi)	20/18/15 ISO 4406 class 9 (NAS 1638)
	Recommended for operating pressure < 150 bar (2150 psi)	21/18/15 ISO 4406 class 10 (NAS 1638)

NEW

Variable speed Fan Drive system

Motor with a proportional pressure relief valve and an anti-cavitation valve integrated in the rear cover. The max speed of the motor can be controlled independently by the engine speed for optimal performance and lower energy consumption. In case of power failure the max speed is achieved. In case of sudden engine stop, the anticavitation valve prevents any fan damage.

- A** Gear pump
- B** Gear motor
- C** Proportional pressure relief valve
- E** Electronic control unit
- F** Temperature sensor
- G** Speed sensor

NEW

Reversible Fan Drive system

Motor with a proportional pressure relief valve, and on/off four way valve and an anti-cavitation valve integrated in the rear cover. The ON-OFF valve is used to reverse the direction for the automatic cleaning of the radiator from dirt and debris in order to increase the cooling efficiency and to reduce maintenance needs.

- A** Gear pump
- B** Gear motor
- C** Proportional pressure relief valve
- D** On/off reverse valve
- E** Electronic control unit
- F** Temperature sensor
- G** Speed sensor

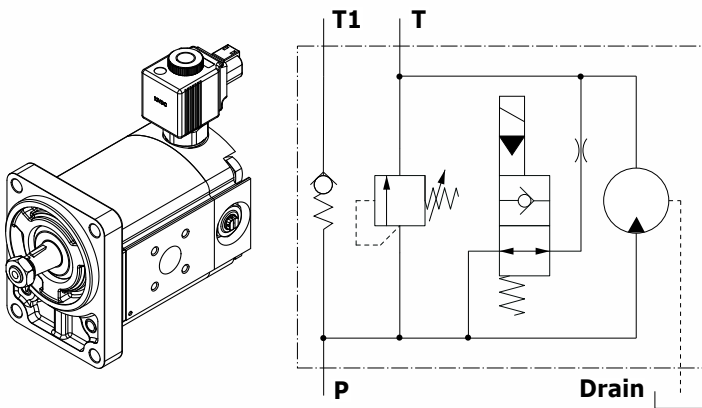

Fan Drive

Example of configurations

Example of 2 speeds Fan Drive configuration

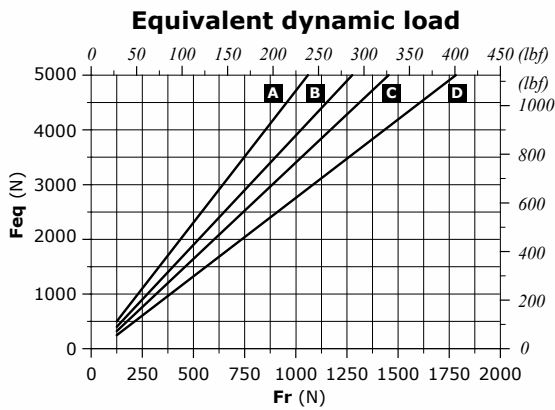

Example of Fan Drive configuration with speed sensor

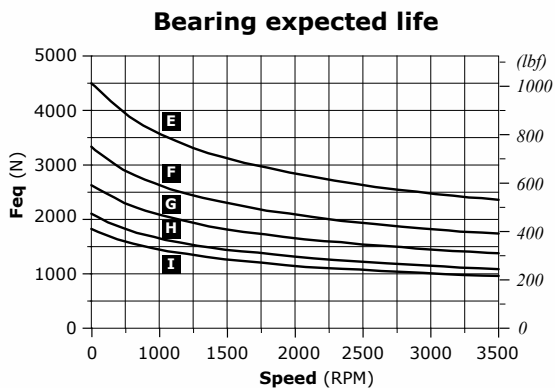

Outrigger bearing

Fan motors are suitable to work when axial loads are below 45 N - 101 lbf and radial loads below 90 N - 20.2 lbf. For higher loads special support flanges with outrigger bearings are available.

- A:** X = 40 mm - 1.57 in
- B:** X = 30 mm - 1.18 in
- C:** X = 20 mm - 0.79 in
- D:** X = 10 mm - 0.39 in

- E:** 1000 h
- F:** 2500 h
- G:** 5000 h
- H:** 10000 h
- I:** 15000 h

Accessories

W0403023

4AC0111900

NOTE: The control unit must be ordered separately from the Fan Drive

Temperature sensor

Range of sensors specifically designed for this kind of applications. All the sensors can be used in air, water and oil. Different connector options.

GENERAL WORKING CONDITIONS		
Part number	W0403023	4AC0111900
Sensor type	NTC	NTC
Operating temperature	from -40 to +125 °C from -40 to +257 °F	from -20 to +105 °C from -5 to +221 °F
Resistance @25 °C (77 °F)	5000 Ohm	10000 Ohm
Environmental protection	IP67	IP67
Connector	AMP Junior Power Timer	AMP Superseal 1.5

CED400W Electronic control unit

Versatile electronic controller for Fan Drive applications, with high performance DSP microprocessor and SAE J1939 CAN Bus protocol. Cooling curves can be a combination of CAN data, temperature, pressure, RPM sensors. Retarder and reverse functions can be easily implemented. Standard behaviour can be graphically configured through **WST STUDIO** software. Custom applications can be developed through the **PHC STUDIO** (IDE - Integrated Development Environment) according to IEC 61139 standard.

GENERAL WORKING CONDITIONS		
Supply voltage		from 8 to 32 V
Max. current output	@ 12 VDC	6 A
Working temperature		from -40 to +85 °C from -40 to +185 °F
Environmental compatibility		EC60068-2-6/27/29
EMC compatibility		
Weather protection	with mating connector attached	IP67
Inputs	Analog	up to 4
	Digital	up to 6
Outputs	Proportional	2 (2A max)
	On/Off	2 (2A max)

For further specifications please see D1WWEE01E catalogue

PHC STUDIO

PHC Studio is an Integrated Development Environment (IDE) to develop and download into the CED400W electronic control unit the Custom application logics and Working parameters. PHC Studio allow to have the complete control of the application, either hydraulic that electronic. It is compliant with all the 5 programming languages of the IEC 61131-3 PLC Standard.
