

# Factory overhauls and repairs by original manufacturer

Including new-part guarantee (12 months)

# Factory overhaul with full new-part guarantee

We carry out full reconditioning on your hydraulic components with the exclusive use of genuine spare parts based on worldwide uniform standards. We then return you the components in technically and visually new condition. Before shipment, we test and calibrate the components against product specifications. This guarantees top quality and reliability.

**On completion of repair and maintenance work, you receive a new-part guarantee (12 months) on all components.**

The main requirement for a factory overhaul is that the main part (the essential value part, e.g. a pump housing) is still recyclable.

When we receive your components at our service plant, we send you a repair quote based on the findings report.

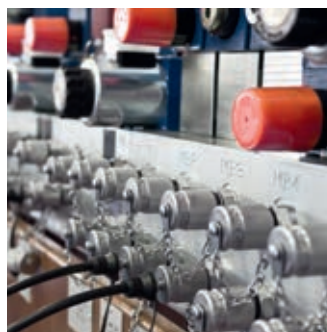

If the part is so damaged that it is no longer repairable, we send you a quote for a new part.

Your hydraulic components are in good hands with us

#### **Cylinders**

Round cylinders  
Tie rod cylinders  
Power cylinders

#### **Manifolds and plates**

Industrial hydraulics  
Mobile hydraulics

#### **Control valves and continuous valves**
