## COUPLERS AND PLUGS

### Couplers & Plugs

Quick Disconnect couplers are the fastest, easiest, and the most reliable means of joining pneumatic and fluid transfer lines. All quick disconnect couplers work on the same principle:

- Hardened balls or pins engage a groove in the coupler plug to hold it securely against a soft seal while permitting the assembly to swivel, thereby preventing kinking or twisting of hose.
- A sliding sleeve releases the locking balls when retracted, permitting the plug to be inserted or removed. The sleeve automatically returns to the locked position when released.
- An automatic shutoff valve in the coupler seals instantly upon uncoupling, eliminating the need for a separate shutoff.

### Features

**Long Service Life:** Zinc plating provides a non-corrosive finish. Heat treating hardens critical wear points. Molded Buna-n seals create a leak proof connection.

**Efficient Performance:** Tubular valve design provides high flow rates. Steel locking balls ensure connection holds tight under the most rugged applications. Spring loaded sliding outer sleeve allows quick connect/disconnect.

**Many Sizes & Styles:** Available in 1/4", 3/8", 1/2", 3/4" inch bodies with male and female pipe threads, hose barb or lock-on ends for every application.

**Interchangeability:** Fully interchangeable with couplers and plugs made by other manufacturers. (See interchange charts)
